

At Green Village

GUIDE TO CUT CHRISTMAS TREES

- Make a straight cut of 1/2 inch off of the stem.
- Use a stand that fits the tree.
- Place tree in water, ASAP!
- Check the stand daily for water levels, water should not go below the base of the tree

- Keep away from major heat sources (fireplaces, heaters, heat vents, direct sunlight)
- Low room temperature will slow the drying process & water consumption
- Stands should provide 1 quart of water per inch of stem diameter

- Do not overload circuits!
- Use miniature lights to reduce drying
- Always turn off the lights before you leave the house or go to bed
- Replace old and worn lights with a new set

DON'T FORGET!

- Santa's Magic Water Spout
- Prolong
- Tree Removal Bag
