LOVE YOUR SOIL NATURAL SOIL FOOD

- Loosens hard, compacted soil
- Increases root mass and drought tolerance of turfgrass
- Spurs soil microbes to break down trapped soil nutrients
- Rich in humates to help restore soil life
- Can be applied year-round
- 15,000 sq.ft. bag

CONTROLLING WEEDS AND INSECTS ORGANICALLY

Your best defense against lawn pests is a healthy, thick lawn.

Let's face it. Lawn control products – weeds, insects, fungus, etc. – are the chief concern of people who want to use organic products exclusively on their lawns. Jonathan Green has two, very effective, organic control products that can be used by lawn owners.

CORN GLUTEN WEED PREVENTER.

Unfortunately, there are no POST-emergent, granular broadleaf weed controls that are organic. However, certain broadleaf weeds (dandelions, clover, chickweed, etc.) and grassy weeds (crabgrass, etc.) can be PREVENTED before they grow organically. Jonathan Green's Corn Gluten Weed Preventer contains a patented, highly concentrated corn gluten that prevents many of these common weeds. In fact, some studies show that Jonathan Green Corn Gluten Weed Preventer provides weed prevention that rivals some synthetic products. Apply Corn Gluten Weed Preventer to the lawn in the early spring.

ORGANIC LAWN FOOD Jonathan Green's Organic Lawn Food is a complex, fully organic lawn fertilizer that provides excellent nutrition to lawns for eight to ten weeks. Containing high-energy protein meals (and not low-energy manures), Organic Lawn Food provides a deep, metered feeding of turf. It is also fortified with iron to enhance the greening power of the fertilizer...without ANY phosphates.
