CONDITIONING YOUR SOIL

Bumper Crop® Soil Builder can greatly improve the quality of your garden soil. It will loosen clay and other hard, compacted earths, improving drainage, planting texture, and aeration. It will help bind sandy or rocky soils to promote water retention. In all kinds of garden soils, Bumper Crop® Soil Builder will make cultivation easier, provide better moisture absorption and retention, increase all-around soil aeration and provide a beneficial environment for micro-organisms.

VEGETABLE GARDENS

- Moisten the area first
- Spread a 2–3 inch layer of Bumper Crop® Soil Builder over area
- Work it into the soil to a depth of about 6 inches
- Water well before and after planting

FLOWER/ROSE GARDENS

- Spread a 2–3 inch layer of Bumper Crop® Soil Builder over area
- Work it into the soil to a depth of 6 inches
- Water well before and after planting

CONTAINER/BURLAPPED/BARE-ROOT PLANTS

- Dig a hole twice as large as the container
- Fill the hole with a mixture of half Bumper Crop® Soil Builder and half garden soil

NEW LAWNS

- Spread a 2–3 inch layer of Bumper Crop® Soil Builder over area
- Work it into the soil to a depth of about 6 inches
- Sow seed and cover with another layer of 1/8 inch Bumper Crop® Soil Builder
- Water thoroughly. Keep moist until germination and the grass is well up

EXISTING LAWNS

- Spread a 1/2 inch layer of Bumper Crop® Soil Builder over the surface
- Work the mixture into the grass using a rake
- After spreading new grass seed onto the area, keep moist until the new grass seed germinates

MULCHING ROSES/VEGETABLES

- Spread a layer of Bumper Crop® Soil Builder 1-3 inches deep on the ground surface around your plants
