

RECOMMENDED GRASS SEED

**FULL
SUN**

BLACK BEAUTY ULTRA GRASS SEED

- Tall Fescue
- Perennial Ryegrass
- Kentucky Bluegrass

**FULL
SHADE**

BLACK BEAUTY SHADY NOOKS GRASS SEED

- Tall Fescue
- Perennial Ryegrass
- Red Fescue
- Hard Fescue

**PART SUN/
SHADE**

BLACK BEAUTY SUN & SHADE GRASS SEED

- Perennial Ryegrass
- Tall Fescue
- Kentucky Bluegrass
- Chewings Fescue

GUIDE TO STARTING YOUR LAWN

1 PREPARE THE AREA

Rake or thatch the area as needed.

2 ADD TOPSOIL

Apply a 0.5" topsoil layer—the Farm at Green Village recommends **Fafard Premium Topsoil**.

3 ADD LIME/STARTER FERTILIZER (optional)

The Farm at Green Village recommends **Jonathan Green Mag-i-Cal Natural Soil Food** and **Veri-Green Seeding and Sodding**.

MAG-I-CAL NATURAL SOIL FOOD

- Rapidly and efficiently raises soil pH
- Calcium and humates balance soil pH and stimulate microbial life
- Encourages nutrient absorption

VERI-GREEN SEEDING & SODDING

- Fertilizer analysis: 12-18-8
- High phosphorus formula helps to develop deep, dense roots
- Apply the same day as seeding or sodding
- Feeds for up to 2 months

4 SPREAD YOUR CHOICE OF SEED (BASED ON SUN/SHADE)

5 SPREAD BIODEGRADABLE STRAW OR MULCH PELLETS

The Farm at Green Village recommends **EZ-Straw Seeding Mulch** and **PennMulch Seed Accelerator**.

EZ-STRAW SEEDING MULCH

- All-natural and easy to use
- Leaves no mess to clean up
- 99% weed-free seeding mulch promotes plant growth
- Safe for pets and children
- Protects against birds
- Works well in small or large areas
- Safe for garden use

PENNMULCH SEED ACCELERATOR

- Better moisture management — super absorbent polymer pellets absorb up to 400 percent of their weight in water to keep seeds and seedlings from drying out.
- Faster turf establishment — mulch and fertilizer combine to form an innovative, all-in-one turf establishment solution that saves you time and money.
- Better germination — matrix of mulch, soil and seed that prevents movement of seedlings during germination for turf establishment results you can depend on.

WATERING AFTER SEEDING

- **WATERING FREQUENCY:** Water daily to keep the soil consistently moist, but avoid overwatering, which can suffocate the seeds and prevent proper germination.

Avoid adding any pre-emergent crabgrass/weed preventer to the seeding area prior to seed germination. This will target the grass seed as well, and prevent your grass seed from germinating.
